BIRD CALENDAR

Bulletin No. 3. May 28, 1909.....

Since the issue of the last Bulletin on April 7 the migration period has reached its climax, the warblers being among the latest arrivals, a small percentage of them only remaining. Nearly all of our summer resident species are here; many have nests and eggs; some few such as the screech owl, robin have young. We are able to report the building of the nest and the presence of eggs in quite a number of species. Fifteen species have been previously reported.
